**SIMATS ENGINEERING**

Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Engineer to Excel

**Student Name:** P. Sudharshan Reddy **Reg. No:**192372204

**Course Code:** ITA0307 **Slot:** c

**Course Name:** Mobile Computing

**Course Faculty:** Dr. Sarvannan

**Project Title:** Mobile Network Protocol Architecture

**Module Photographs**:

Mobile Network Protocol Architecture is a layered structure that enables communication between mobile devices and networks. It consists of different protocols that manage data transmission, connectivity, security, and mobility. The main layers include the application, transport, network, data link, and physical layers. Protocols such as TCP, IP, RRC, and NAS help transmit data, establish connections, and manage user authentication. This architecture is used in 2G, 3G, 4G, and 5G networks to provide services such as voice calls, messaging, and mobile internet.

**Project Description**: Mobile Network Protocol Architecture enables communication between mobile devices and cellular networks through different layers and protocols. It manages data transmission, connectivity, security, and mobility in 2G, 3G, 4G, and 5G networks.
